Umi Muzayanan, Joko Tri Haryanto, and Koeswinarno
Editorial Preface

This is the 19th volume of the 2nd issue of Borneo Administration Journal. As a journal published every four months, we are excited because the number of articles we receive from time to time increases steadily. It is a big challenge to present a variety of manuscripts, mainly when the journal aims to publish high-quality papers. The enthusiasm of the great writers to be published in this journal shows a great need for the presence of the best journals in the field of public administration and related fields as included in the journal’s scope.

We realize that the process that is carried out needs to be careful to maintain the journal's quality. Therefore all the flow and mechanisms in publishing manuscripts at JBA must be maintained.

This time we have seven selected manuscripts published. The first paper is entitled Analysis of Industry 4.0 Readiness among Regional Governments in Indonesia: The Worth of Digital Wisdom and Values in Public Services and is written by Wawan Sobari, Ibnu Asqori Pohan, and Nurizal Dwi Priandani. Their paper aims to evaluate the readiness of regional governments to engage with the fourth Industrial Revolution (Industry 4.0), especially in e-service delivery. In the era of Industry 4.0, governments are increasingly considered public service centres that are evaluated for their ability to provide expanded services in the most efficient and individual ways.

The second paper is written by Yudianto and Sri Ningsih, and is entitled The Role of Risk Management Implementation In Increasing Accountability: A Study of All Regency/Municipality Local Governments. The regional government is susceptible to risks that may impede attaining objectives while executing its responsibilities and powers, necessitating implementing risk management measures. Implementing risk management in local governments is a novel development, with corresponding guidelines issued in 2019. This study seeks to test whether applying risk management based on these provisions can positively impact increasing financial accountability. The present investigation involves the entirety of the population within the jurisdiction of the regency/municipality government as the research participants.

The third paper is written by Ahmad Suryaningrat, Sarwono, and Firda Hidayati and entitled Optimizing Regional Development Policies through the Cool RT Program to Support Community Empowerment (Study in Blitar City). This study aims to identify and analyze the optimization of regional development policies through the RT Keren program to support community empowerment in Blitar City. This optimization is related to applying transformative ideas and answers to sustainable development programs or SDGs. The research method used is descriptive with a qualitative approach.

The fourth paper is entitled Model of government communication to build leadership credibility in Banten Province, Indonesia and is written by Eva Eviany and Ummy Athahirah. Credibility is a significant foundation in leadership practice that causes a leader to be respected voluntarily by his followers. Government credibility is through communication between the government and its people. However, the problem of the credibility of the government leadership in Banten Province is a challenge considering that Banten Province is one of the regions with political dynasties. Therefore, this study describes the function of communication and formulates a communication function model to build the credibility of Banten Province's government leadership. This study used Quasi-Qualitative Design (QQD) with collection through semi-structured interviews, observations, documentation, and questionnaires.
The fifth paper is written by Jusuf Irianto, Isnaini Rodiyah, Khatidjah Omar, with the paper entitled Use of the Unified Theory of Acceptance and Use of Technology (UTAUT) to Analyze the Implementation of the Massive Open Online Course (MOOC) at the Indonesian Financial and Development Supervisory Agency. The training and development program for the State Civil Apparatus in the public sector is very important because it is related to public performance and services. This study aims to analyze the implementation of the Massive Open Online Course (MOOC) for financial supervision training. The basic concept of this study uses an integrated Unified Theory of Acceptance and Use of Technology (UTAUT). This qualitative research was conducted at the Center for Education and Training of Auditors of the Financial and Development Supervisory Agency (Pusdiklatwas BPKP), which is responsible for training financial and development auditors.

Next, the sixth paper entitled Local Government Expansion of Mobile Governance during the Pandemic, written by Binti Azizatun Nafi'ah. This study will contribute to the scientific literature on m-governance and public administration application development in Indonesia. Aims/Objectives: This study maps local government applications and identifies categories of mapping applications owned by local governments in East Java Province during the COVID-19 pandemic, mobile governance has been more popular than old public services since the government implemented social distancing and stay-at-home policies.

The final paper is written by Umi Muzayanah, Joko Tri Haryanto, and Koeswinarno and is entitled The Analytical Hierarchy Process (AHP) For Best Employee Selection: Reward Implementation Strategy in Government Agencies. The reward is a strategy for empowering employees as human resources to achieve the bureaucratic reform target, namely creating civil servants' human resources with integrity, neutrality, competence, capability, professionalism, high-performing, and prosperity. An appreciation of the award is giving the title of the best employee to ASN (Civil Servants), who have the best performance and achievement. Generally, the superior carries out the employee appraisal system, which is often subjective.

All the papers that have been submitted provide essential input, especially in the development of current public policy studies. This issue will serve as a reference for JBA stakeholders. Finally, we would like to thank all members of the editorial team and reviewers for their outstanding dedication. We realize that there is still much that needs to be done to improve the quality of JBA. Therefore we ask all stakeholders to provide support to JBA continuously. Happy 78th Independence Day to the Republic of Indonesia.

Warm Regards,

Editor
